

MUHAMMAD HUZAIFA

Full-Stack MERN & AI Developer

+92-317-3652169 | muhammadhuzaifakashif765@gmail.com | LinkedIn | GitHub

SUMMARY

Full-Stack Developer proficient in Next.js 15, React, and MongoDB. Skilled in architecting scalable web ecosystems and integrating Deep Learning models (ViT, CNNs) to solve real-world problems. Experienced in building end-to-end products with secure authentication, hybrid databases, and payment gateways, focused on delivering high-performance, AI-driven user experiences.

SKILLS

Languages/Frameworks: JavaScript (ES6+), TypeScript, Python, SQL, Next.js 15, Node.js, Express, Git
AI & Machine Learning: PyTorch, TensorFlow, Hugging Face (Transformers), ViT, Bark, CLIP, ResNet-50
Cloud & Databases: MongoDB, Supabase (PostgreSQL), Clerk, Stripe, Nginx, Linux (Ubuntu), Vercel

EXPERIENCE

Software Engineer Intern
Climate Forward Pakistan (CFP)

July 2025 – October 2025
Sukkur, Pakistan (Remote)

- Engineered a community platform using Next.js 15 with an AI Waste Classifier, deploy to serve many users.
- Architected a custom Python scraping framework to aggregate climate behavioral data from 10+ sources for localized research.
- Strengthened data security by deploying firewalls and secure protocols, ensuring 100% integrity for research databases.

PROJECTS

Generative Cricket Commentary System | *PyTorch, ViT, GPT-2, Bark, CLIP*

Dec 2025

- Developed an end-to-end multi-modal pipeline that generates descriptive text and expressive audio commentary from uploaded images of cricket shots.
- Utilized Vision Encoder-Decoder (ViT + GPT-2) and Bark audio model for high-fidelity, nuanced spoken output.
- Integrated OpenAI CLIP to reduce shot misclassification by 25%, distinguishing subtle athletic movements.
- Built an inference application using Gradio for real-time testing and demonstration of the generated commentary.

EcoVision: Sustainable AI Ecosystem | *Next.js 15, ResNet-50, Supabase, MongoDB, Stripe*

Jan 2026

- Built a platform integrating ResNet-50 for waste classification (92% accuracy) serving 1,000+ monthly active users.
- Designed a hybrid backend with Supabase and MongoDB, using Clerk for MFA and Stripe for secure payments.
- Developed a real-time discussion engine and blog system architected to scale user engagement by 50%.
- Optimized frontend performance using Server Components and Edge Functions, achieving a sub-1s load time.

EDUCATION

Sukkur IBA University
Bachelor of Science in Computer Science

Graduation: June 2026
CGPA: 3.45

AWARDS & CERTIFICATIONS

HP LIFE Data Science & Analytics Certificate: Completed comprehensive training in data science practices, methodologies, and analytics tools for data-driven business approaches.

Advanced Learning Algorithms (Stanford Online - DeepLearning.AI): Specialized in advanced machine learning algorithms through Stanford and Coursera verified certification.

Introduction to MongoDB: Completed MongoDB fundamentals and database management certification.
